CAM350 V14 | Windows

Die Release 2018 (V14) setzt Windows 64 Bit (Windows 8 oder höher) auf Seiten des Clients voraus. Ab CAM350 Build 1501 ist eine Installation auf Win7-Rechnern nicht mehr möglich.

Wir haben in der Vergangenheit wiederholt von Anwendern gehört, die CAM350 V14 erfolgreich mit Windows 7 betreiben. Wir raten dennoch dringend davon ab, zumal wir im A-B-Vergleich bemerkt haben, dass einzelne Funktionen auf Win7-Systemen nicht ausgeführt werden.

DownStream Technologies hat folgende Hintergrund-Informationen zur Verfügung gestellt:

Problems with Windows 7

1. The Microsoft Libraries we used to encrypt the 2018 release. This means that on some Windows 7 systems, there might be .dll files and such missing that are needed to run the program. Would likely effect newer Windows 7 systems more often. There is also some concern that in specific setups we might do damage. Again the program is not designed for Windows 7, so the potential is there.
2. The 3D features in the 2018 release was a deciding factor for dropping Windows 7 support. Windows 7 lacked specific resources we needed for 3D. Crashes and other problems would likely result if someone tried to use a 3D feature on a Windows 7 system.
3. Windows 7 is limited in the amount of system memory it can apply to a program. This limit was becoming more and more of a problem for our users with newer systems and large jobs for our products.
4. Windows 7 reached end of life in 2015. Extended end of life is Jan. 2020.
